

Given a sequence of matrices write an algorithm to find most efficient way to multiply these matrices together. To find the optimal solution, you need to find the order in which these matrices should be multiplied.

Algorithm: →

- 1) START
- 2) input n
- 3) $p[n+1]$
- 4) if $i \geq n$ goto step 6
- 5) input $p[i]$, $p[i+1]$
- 6) Print $matchainorder(p, n+1)$
- 7) STOP

```

matchainorder(p, n) {
    m[n][n], i, j, k, l, q;
    for (i=1; i<n; i++)
        m[i][i] = 0;
    for (l=2; l<n; l++) {
        for (i=1; i<n-l+1; i++) {
            j = i+l-1;
            m[i][j] = INT.MAX;
            for (k=i; k<=j-1; k++) {
                q = m[i][k] + m[k+1][j] + p[i-1]*p[k]*p[j]
                if (q < m[i][j])
                    m[i][j] = q
            }
        }
    }
    return m[1][n-1];
}
    
```

a set of available types of coins. let suppose you have infinite of each type of coin. For a given value N , you have to design algorithm and implement it using a program to find no. of ways in which these coins can be added to make sum values equal to N .

- Ans: →
- 1) START
 - 2) input n
 - 3) $i, j, a[n]$
 - 4) if $i \geq n$ goto step 7
 - 5) input $a[i]$
 - 6) input amt
 - 7) $i = 1$
 - 8) if $i \geq \text{amt}$ goto step 11
 - 9) $\text{ans}[i] = 0$
 - 10) $\text{ans}[0] = 1$
 - 11) if $j \geq n$ goto step 14
 - 12) if $i \geq \text{amt}$ goto step 11
 - 13) if $(a[j] \leq i)$
 (i) $\text{ans}[i] = (\text{ans}[i - a[j]])$
 - 14) Print $\text{ans}[\text{amt}]$
 - 15) STOP

a set of elements you have to partition the set into two subset
that the sum of elements in both subset is same. Design an
and implement it using a program to solve this problem.

Ans: →

- 1) START
- 2) input n
- 3) $i, j, a[n]$
- 4) if $i \geq n$ goto step 6
- 5) input $a[i]$
- 6) $sum = 0, i = 0$
- 7) if $i \geq n$ goto step 8
- 8) if $(sum \% 2 \neq 0)$
 - (i) Print "No" return 0
- 9) $sum = sum / 2$
- 10) $bool\ s[n+1][sum+1]$
- 11) if $i \geq n$ goto step 16
- 12) if $j \geq sum$ goto step 11
- 13) if $(j == 0)$
 - (i) $s[i][j] = 1$
- 14) else if $(i == 0)$
 - (i) $s[i][j] = 0$
- 15) else
 - (i) if $(a[i-1] > j)$
 $s[i][j] = s[i-1][j]$
 - (ii) else
 $s[i][j] = (s[i-1][j] || s[i-1][j - a[i-1]])$
- 16) if $(s[n][sum])$, Print "Yes"
- 17) else Print "No"
- 18) STOP
